Significant River Flood Outlook

Valid: 9/6/2017 - 9/11/2017

West Gulf River Forecast Center 9/6/2017 1:46:30 PM

**SIGNIFICANT RIVER
FLOODING POSSIBLE.**

**SIGNIFICANT RIVER
FLOODING LIKELY.**

**SIGNIFICANT RIVER
FLOODING OCCURRING
OR IS IMMINENT.**

Significant River Flooding Impacts include:
Roads adversely affected. Residential,
commercial, industrial, and/or agricultural
areas affected. May require evacuation of people.

NOTE: Flash Flooding or Minor River Flooding
will NOT be included in this outlook.

Neches Basin – Record Flooding – B.A. Steinhagen continues to release water downstream to pass the receding flood waters from upstream but they are continuing to cut release flows back. Evadale continues in moderate flood as Dam B releases keep the river elevated.

Downstream, Pine Island Bayou has receded to moderate flood and continues to fall. USGS has installed a temporary gauge at the Salt Water Barrier so we are seeing the flood recede there and begin to recede at Beaumont. Flood wave should drop below major in a next couple of days.

San Bernard Basin – Major Flooding – Stream gauges on the San Bernard including East Bernard (EBBT2), Boling (BOLT2), and the new stream gauge upstream of Sweeney (OCNT2) are all slowly falling at this time. Therefore Sweeney (SWYT2) should also be falling, although there are no current observations from there to confirm this. Sweeney remain in major flood category.

Sabine Basin – Major Flooding – Major flooding continues on the lower Sabine River system from Deweyville (DWYT2) to Orange (ORNT2). Water should remain high for a few days in this region as the flood wave drains into the Gulf.

OPERATIONAL PRIORITIES:

1. Protect life and property.
2. Support rapid & effective response.
3. Collect and disseminate accurate incident information to improve decision-making.
4. Accurately track incident costs associated with assigned resources for cost recovery.
